Exploratory Data Analysis Using R-Ronald K. Pearson 2018-05-04 Exploratory Data Analysis Using R provides a classroom-tested introduction to exploratory data analysis (EDA) and introduces the range of "interesting" - good, bad, and ugly - features that can be found in data, and why it is important to find them. It also introduces the mechanics of using R to explore and explain data. The book begins with a detailed overview of data, exploratory analysis, and R, as well as graphics in R. It then explores working with external data, linear regression models, and crafting data stories. The second part of the book focuses on developing R programs, including good programming practices and examples, working with text data, and general predictive models. The book ends with a chapter on "keeping it all together" that includes managing the R installation, managing files, documenting, and an introduction to reproducible computing. The book is designed for both advanced undergraduate, entry-level graduate students, and working professionals with little to no prior exposure to data analysis, modeling, statistics, or programming. it keeps the treatment relatively non-mathematical, even though data analysis is an inherently mathematical subject. Exercises are included at the end of most chapters, and an instructor's solution manual is available. About the Author: Ronald K. Made in Europe-Klaus Nathaus 2016-01-22 This edited collection studies the production and dissemination of popular music, tourism, cinema, fashion, broadcasting programmes, advertising and coffee in Western Europe in the twentieth century. Focussing on the supply side of popular culture, it addresses a field of study that is neglected in European historiography. Moreover, it provides a theoretical and methodological discussion that takes into account the inherent dynamics of content production and the role of cultural intermediaries in the change of cultural repertoires. Taking key developments in the culture industries in the USA as a point of reference, the book highlights particularities of cultural production in Europe. It identifies a greater autonomy of creatives, stronger influence of critics and a lesser concern with audience research as three characteristics of the production regime in Western Europe. It takes into view the transfer of popular culture across the Atlantic and between European countries and offers new insights into research on the cultural Americanisation of Europe. This book was originally published as a special issue of the European Review of History.

Selling Sustainability Short?-Janina Grabs 2020-06-30 Can private standards bring about more sustainable production practices? This question is of interest to conscientious consumers, academics studying the effectiveness of private regulation, and corporate social responsibility practitioners alike. Grabs provides an answer by combining an impact evaluation of 1,900 farmers with rich qualitative evidence from the coffee sectors of Honduras, Colombia and Costa Rica. Identifying an institutional design dilemma that private sustainability standards encounter as they scale up, this book shows how this dilemma plays out in the coffee industry. It highlights how the erosion of price premiums and the adaptation to buyers' preferences have curtailed standards' effectiveness in promoting sustainable practices that create economic opportunity costs for farmers, such as agroforestry or agroecology. It also provides a voice for coffee producers and value chain members to explain why the current system is failing in its mission to provide environmental, social, and economic co-benefits, and what changes are necessary to do better.

Interplanetary Outpost-Erik Seedhouse 2012-02-02 "Interplanetary Outpost" follows the mission architecture template of NASA's plan for Human Outer Planet Exploration (HOPE), which envisions sending a crew to the moon Callisto to conduct exploration and sample return activities. To realize such a mission, the spacecraft will be the most complex interplanetary vehicle ever built, representing the best technical efforts of several nations. A wealth of new technologies will need to be developed, including new propulsion systems, hibernation strategies, and revolutionary radiation shielding materials. Step by step, the book will describe how the mission architecture will evolve, how crews will be selected and trained, and what the mission will entail from launch to landing. However, the focus of "Interplanetary Outpost" is on the human element. The extended duration, logistical challenges, radiation concerns, communication lag times, isolation, and deleterious effects on the human body will conspire to not only significantly impair human performance but also affect the behavior of crewmembers. This book addresses each of these issues in detail while still providing the reader with a background to the necessary elements comprising such a mission.

Too Many Bosses, Too Few Leaders-Rajeev Peshawaria 2011-05-10 How did Alan Mulally—an outsider to the auto industry—lead such a spectacular turnaround at Ford? How did Morgan Stanley CEO John Mack keep his company from imploding even as Lehman Brothers collapsed? What is it that enables such extraordinary leaders to galvanize their talents and energy, as well as the talents and energy of those who work for them, to achieve superior performance no matter what challenges they face? Rajeev Peshawaria has spent more than twenty years working alongside top executives at Fortune 500 companies and training them in leadership, including as Global Director of Leadership Development programs at American Express, as Chief Learning Officer at both Morgan Stanley and Coca-Cola, and as one of the founding members of the renowned Goldman Sachs leadership development program known as Pine Street. The Oxford Handbook of Organizational Climate and Culture-Karen M. Barbera 2014-05-07 The *Oxford Handbook of Organizational Climate and Culture* presents the breadth of topics from Industrial and Organizational Psychology and Organizational Behavior through the lenses of organizational climate and culture. The Handbook reveals in great detail how in both research and practice climate and culture reciprocally influence

each other. The details reveal the many practices that organizations use to acquire, develop, manage, motivate, lead, and treat employees both at home and in the multinational settings that characterize contemporary organizations. Chapter authors are both expert in their fields of research and also represent current climate and culture practice in five national and international companies (3M, McDonald's, the Mayo Clinic, PepsiCo and Tata). In addition, new approaches to the collection and analysis of climate and culture data are presented as well as new thinking about organizational change from an integrated climate and culture paradigm. No other compendium integrates climate and culture thinking like this Handbook does and no other compendium presents both an up-to-date review of the theory and research on the many facets of climate and culture as well as contemporary practice. The Handbook takes a climate and culture vantage point on micro approaches to human issues at work (recruitment and hiring, training and performance management, motivation and fairness) as well as organizational processes (teams, leadership, careers, communication), and it also explicates the fact that these are lodged within firms that function in larger national and international contexts.
